Streamline Healthcare Management Operations with Unitech StageGO Software Solution

Industry

Disaster Health & Medical

Application

Barcode-based device staging solution

Product

PA768 / StageGo

Case Description

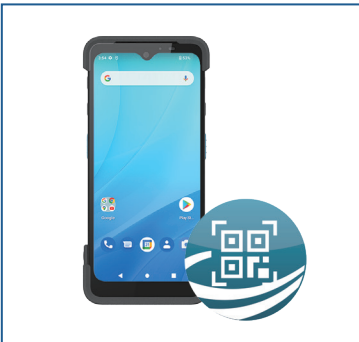

As a leading Engineering and Design firm in the Disaster Health and Medical industry, the business has been on the front lines during the COVID-19 pandemic, providing essential services such as field hospital management, testing logistics, and securing medical supplies and personal protection equipment. Unitech's StageGO software solution enabled the client to streamline its healthcare management operations.

The reason to choose Unitech Software Solutions

StageGO works in three simple steps: create scripts, print QR codes, and scan QR codes. Users can configure multiple devices simultaneously within these steps. Also, StageGO's ability to compress and optimize script commands along with its integration of industrial standard AES strong encryption onto its scripts and barcodes and SSL encryption capabilities ensured the security and privacy of information. Moreover, StageGO significantly reduce the staging time for each device.

Challenge & Solutions

The business needed a software solution that will allow them to setup and deploy their Unitech devices to the fields in the shortest time possible. And because of the sheer number of devices they needed to setup, it would be very tedious and time consuming if they were to have a lot of staff to work on the device setup. The StageGO software solution enabled the client to create configuration QR Codes and then pick up the devices to scan the QR Codes for fast, efficient and secure device setup. When an IT admin picks up a device to scan the config QR Codes, that device runs the setup by itself and then the IT admin can leave it to run and work on the next devices in parallel. As a result, the client found it easy to minimize the number of staff to work on the device setup, and maximize the number of devices deployed per person.

PA768 / StageGo

Benefits

- Swift and Effortless Device Staging for Unitech Android Mobile Devices.
- Supports over 250 configuration commands for all enterprise needs.
- Enhanced Security and Privacy ensuring the content of the configurations are not visible to the prying eyes.
